## About us

The weyer group is a group and supplier-independent corporate association of engineering and consulting companies, linked under company law. We are based in Germany, Austria, Switzerland and Poland. With over 100 permanently employed personnel, 20 of whom are officially recognized experts, we cover all aspects of engineering and consulting in the field of process and environmental engineering.

As general contractor, we execute projects in the fields of process engineering and environmental protection in an interdisciplinary manner. Our principals come from the chemistry, pharmacy and mineral oil sectors, as well as from supply and disposal. Not only multinational groups, but also established medium-sized companies, administrative bodies and ministries belong to our circle of clients.

**“Quality is not merely accidental, it is always the result of careful thought.”**

John Ruskin (1819-1900), English author,  
art critic and social philosopher

### Our focus

As an expertise network of engineers, scientists and business people, we focus on interdisciplinary solutions to problems. Our unique characteristic is a combination of plant planning and expert opinions. Consequently, our clients are not only supplied with precise plant engineering, but also with all appurtenant expert opinions.

In other words **allround. smart.**
