

# Pharmaceutical design and qualification

After 20 successful years of executing projects with you mainly in the areas of waste air and waste water treatment plants and tank farms, as well as projects and consulting in the areas of process safety and explosion protection connected with the implementation of the ATEX guidelines, Weyer and Partner is able today to provide the following services for the design of development and production plants for pharmaceutical APIs and final dosage forms as well as specialty chemicals:

### Pharmaceutical and specialty chemical plants design services | [weyer special](#)

- Feasibility and concept studies
- Basic design
- Detail design
- Procurement support
- Planning, supervision and coordination of construction
- Planning, supervision and coordination of commissioning

### Pharmaceutical qualification services | [weyer special](#)

- VMP /QMP
- Planning, execution and supervision/ coordination of DQ / IQ / OQ / PQ
- Planning and execution/moderation of risk analyses
- Validation support
- Supplier audits

### Your advantage

You benefit of more than 30 years engineering experience in the design of pharmaceutical and specialty chemicals plants. This fast extension of the pharmaceutical engineering services was possible because Linde KCA Dresden decided to close the Basel office by end of 2009 and the majority of the collaborators joined Weyer and Partner.

A cooperation agreement was settled between weyer group and Linde KCA Dresden in order to make the execution of larger and supra-regional projects for weyer group and Linde clients possible, as well as to provide access to a bigger pool of specialists of weyer group and Linde KCA.
