LOGISTICS

The logistics consulting of the weyer group

An essential part of the overall expenses of industrial enterprises are the logistics costs – and taking into account the trend in energy prices this is certainly on the increase. Combined with the demands of service quality this results in substantial spheres of activity and optimisation for many enterprises.

What we can offer you:

- 🕒 logistics due diligence
- 🕒 logistics audits
- 🕒 logistics concepts
- 🕒 "green" logistics
- 🕒 safety-related logistic project management

1 Logistics due diligence

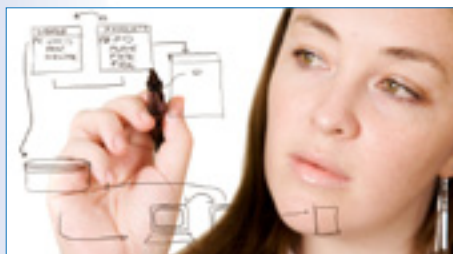

To diligently assess the logistic efficiency of organisations we carry out brief and detailed assessments as well as a potential analysis.

📌 Example: In line with corporate assessments we do a report on logistics capabilities.

2 Logistics audits

To make logistic processes more effective and efficient we assess and optimise logistic processes.

📌 Example: In the case of capacity building we assess storage processes from a logistics point of view and optimise the warehouse logistics as required.

3 Internal and external logistics concepts

Within the scope of rearrangement or re-organisation of business units we develop the facility or enterprise logistics (procurement, production, distribution, disposal) and assure the integration of the facility or enterprise logistics into a supply chain.

📌 Example: For new developments of locations we assume the conceptual design of the enterprise logistics from procurement to disposal and supply chain management.

4 "Green" logistics

We plan and implement environmental logistics to strengthen a sustainable organisational development. At the same time we deal with life cycle assessment, environment management pursuant to EMAS/ISO 14001 and sustainable supply chain management.

Example: We support enterprises in their environmental reorganisation of logistic processes to improve or stabilise their market position.

5 Safety-related logistic project management

As the safety of facilities and inside enterprises have many points of contact with logistical problems we combine environment and safety engineering, our analytic expertise and logistics taking cost efficiency into account.

Example: For chemical enterprises we develop the environmental and safety-related design and logistical structure of storage of hazardous materials.

Your advantages:

- Independent SWOT analysis of your logistics performance
- Increase of your reliability by improving the quality of the logistic processes
- Benchmarking and measurement via ratios
- Decision-making aids concerning investments
- Increase of your value added concentration by an optimised flow of materials
- Establishment of environmental logistics
- Relief for your logistics staff
- Cost reduction and yield increase and increase in efficiency

The weyer group offers customised solutions for logistic problems and challenges. This comprises the analysis of your logistics as well as consulting, planning and realisation in line with your logistic tasks.

We also combine the tried-and-tested skills of our experts, engineers, scientists and business economists with regard to plant safety and procedural facility planning with our logistic services. This enables us to understand and review your logistic problems in your interest and to your satisfaction and deliver a feasible solution at the end of the day.
